Tipo di campione		Arterioso																																																																																																																			
T		37,0 °C																																																																																																																			
FO ₂ (I)		21,0 %																																																																																																																			
Reparto (Paz.)																																																																																																																					
<hr/>																																																																																																																					
Valori emogas																																																																																																																					
pH	7,413	[7,350 - 7,450]																																																																																																																			
↑ pCO ₂	55,5 mmHg	[35,0 - 45,0]																																																																																																																			
↓ pO ₂	53,3 mmHg	[75,0 - 100]																																																																																																																			
Valori ossimetrici																																																																																																																					
ctHb	13,3 g/dL	[- -]																																																																																																																			
Hct _c	40,7 %	[- -]																																																																																																																			
↓ sO ₂	86,4 %	[95,0 - 99,0]																																																																																																																			
FO ₂ Hb	84,8 %																																																																																																																				
FCOHb	1,7 %	[0,0 - 2,0]																																																																																																																			
FHHb	13,4 %																																																																																																																				
FMetHb	0,1 %	[- 1,5]																																																																																																																			
Valori calcolati																																																																																																																					
p50 _c	27,37 mmHg																																																																																																																				
ctO _{2c}	15,8 Vol%																																																																																																																				
pO ₂ (a)/FO ₂ (I) _c	254 mmHg																																																																																																																				
Stato acido-base																																																																																																																					
↑ cHCO ₃ ⁻ (P) _c	35,4 mmol/L	[22,0 - 29,0]																																																																																																																			
↑ cHCO ₃ ⁻ (P st) _c	32,3 mmol/L	[17,0 - 20,0]																																																																																																																			
↑ cBase(B) _c	8,9 mmol/L	[-2,0 - 2,0]																																																																																																																			
↑ cBase(Ecf) _c	10,8 mmol/L	[-1,0 - 1,0]																																																																																																																			
Valori elettroliti																																																																																																																					
cNa ⁺	144 mmol/L	[136 - 146]																																																																																																																			
cK ⁺	4,0 mmol/L	[3,5 - 5,3]																																																																																																																			
cCl ⁻	101 mmol/L	[97 - 110]																																																																																																																			
cCa ²⁺	1,22 mmol/L	[1,15 - 1,25]																																																																																																																			
Anion Gap _c	7,5 mmol/L																																																																																																																				
Valori metaboliti																																																																																																																					
cGlu	110 mg/dL	[70 - 110]																																																																																																																			
cLac	0,7 mmol/L	[0,5 - 1,6]																																																																																																																			
ctBil	0,0 mg/dL	[- -]																																																																																																																			
Note																																																																																																																					
↑	Valore/i sopra l'intervallo di riferimento																																																																																																																				
↓	Valore/i sotto l'intervallo di riferimento																																																																																																																				
c	Valori calcolati
